

Six Most Dangerous Characteristics of Other Scientist Job Boards

1

Most Other Job Boards Only Post Ads for Employers Who Pay to Post There.

Think about this for a minute. If a job board is only posting positions for companies that are paying to post their jobs there, how many positions do you think the job board is going to have? This essentially places you at the whim the job board's marketing plan and whether or not the employers it markets to have enough money to post ads—or are willing to do so. That is the reason why other job boards have less than 5% of the jobs that are on ScientistCrossing. Are we making sense yet?

ScientistCrossing does not charge employers to post jobs. In fact, it goes one step further by having hundreds of full-time employees research the market and put the jobs they find on our site at no cost to employers. In addition, we contact employers and ask them to post their jobs with us, and because we do not charge them to do so, they almost always post their jobs with us when they have vacancies.

2

Most Other Job Boards Are Not Specialized.

When a job board is not specialized, you get a smattering of everything. You may find some scientist jobs, but you will not find even a fraction of the jobs out there. Most job boards are not specific, and for that reason, they waste your time.

All we do at ScientistCrossing is post scientist jobs. We are extremely good at this. Because we are so specialized, we know about every place we can find the jobs, and we know every employer who can offer them. Our efforts are focused. We are also a company that specializes exclusively in the scientist industry. We have numerous scientist professionals working for us. In addition, we are a content-based organization that writes extensively about the scientist industry. Accordingly, we are in touch with what is going on.

3

Most Other Job Boards Are Not Run by Serious Organizations.

Many job boards are small organizations. They may be run as small side businesses. They may be run by people who have nothing to do with the scientist industry. Are these the people you want to trust with your career?

ScientistCrossing is a serious organization. In addition to scores of researchers, we have a large dedicated team of computer programmers, numerous writers, and other staff members. As a result, our site has the strength in the market to go out and find tons of jobs as well as get them from employers. ScientistCrossing exists for you, and we are very serious about what we do.

4

Most Other Job Boards Do Not Work.

The most serious issue with many job boards is that they simply do not work. The reason for this is clear: On most job sites, you only see a small fraction of the jobs that are available in the market. You may apply for jobs on these sites, but you will get no results.

Each day, many scientist professionals report to us that they have found positions through ScientistCrossing. Having access to all of the jobs in the market at one time makes a giant difference. The many testimonials on the ScientistCrossing website bear evidence to the fact.

5

Most Other Job Boards Do Not Allow You to Monitor What Is Really Going on in the Market.

Most other job boards only put the jobs on their sites that advertisers are willing to pay for. This results in a limited number of positions on these sites. Sure, you can sign up for job updates if you like and receive some job notices each day. Notwithstanding, these sites will never actually show you everything that is actually going on in the market.

Most ScientistCrossing members have joined our site for the simple reason that they want to always know what is going on in the market. You deserve to know if you are in demand, what the salary range is for your position, and what is going on across the country (or world). You also deserve to know when your dream job comes up; it could be any day on ScientistCrossing. If you are not a member, you could miss it.

ScientistCrossing has more than 100 researchers, extremely sophisticated monitoring technology, and other tools to ensure that we show you exactly what is going on in the market at all times. We go to great lengths for ScientistCrossing members and collectively spend more than 1,200 hours per day, six days per week, conducting research on your behalf. The result is that we can show you just about everything going on in the scientist industry at one time. Try getting that from an ordinary job board.

6

Most Other Job Boards Are Nonexclusive.

With most job boards, anyone with an Internet connection can apply for a job on the site. In fact, on most job boards, an employer advertising a position for an scientist manager will likely get applications from cooks, salesmen, and others who have nothing to do with the scientist profession. In addition, on nonexclusive job sites, employers are often overwhelmed with applications, and this makes it much more difficult for you to stand out.

In order to apply for positions on ScientistCrossing, we require that people be subscribers. The vast majority of our positions come directly from employer websites (more than 250,000), where, for the most part, the only people applying for them are ScientistCrossing members, as these positions are not otherwise advertised. Most of these employers will believe you were interested in their companies and simply went to their websites (without ScientistCrossing) and saw they had advertised openings in scientist. They will be flattered. Employers also like ScientistCrossing because they know they are only going to get a limited number of applicants compared to other sites.

Because ScientistCrossing finds jobs and charges membership fees to see these jobs, our members have far fewer people to compete with when applying for jobs. Being part of an exclusive site makes a gigantic difference and provides you with a significant edge you would not have using other sites. When you join ScientistCrossing, you stand out.
